How it works

Capture

Leverage your current video equipment (camera agnostic) or shop DTiQ for new hardware to capture and record footage that provides you with operation-improving data.

- No port forwarding or VPN needed.
- Works with any PC, Mac, or mobile device – access anywhere.
- Tailored solutions catered for your needs and goals.

Analyze

- **Track transactional trends** such as refunds, voids, fraud, and discounts at multiple locations.
- **Investigate** incidents, false claims, and theft by reviewing video footage and suspicious activity with exception-based reporting alerting you for each location.
- **Monitor efficiency** such as food waste, employee productivity/compliance, and customer experience.

Store & share

- Using **Cloud Archive**, receive on-demand services for critical surveillance footage to instantly share and stream, track, and set parameters.
- With **OSS (Off-Site Storage)**, you automatically store live and previously captured video from selected cameras, ensuring access to stored video at all times.

Act

- Use audio features to audit activity throughout your locations.
- **DTiQ's SmartAudit™** works with auditors and machine learning to track data and offer detailed reports for operational insights at each location.
- Grow revenue by improving customer experience, speed of service, operations, and multi-location management capability.

Increase your

ROI

Manage the most important aspects of your business anywhere, from any device, at all times – **resulting in up to an 18% increase in profits.**

The audits are an extremely helpful tool as well – I simply check the score to get an idea of what I'm looking at, then look at the images, which tell me everything I need to know. I'm most interested in actual events, so the audits give me a snapshot of what's going on. If needed, I can easily pass the results on to one of my District Managers for further investigation.

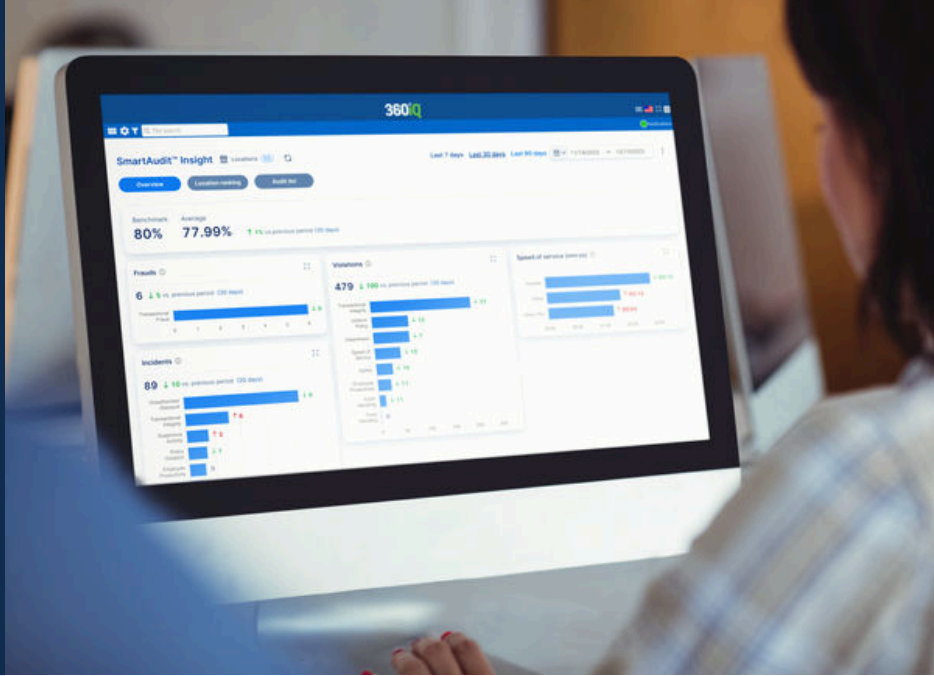

There was a situation in which a team member was completing a number of high refunds, which require a manager code. We asked the manager on duty about it, and she said she hadn't completed any refunds during that shift and didn't know what had happened. When we looked back at the cameras and the POS overlay, we saw another employee putting in the manager's code, then executing the refunds when no customers were present.
